Experience

Full-Stack Developer - *Fintheon, Florida • US, Remote*

Apr 2026 – Jun 2026

- Owned backend infrastructure **Hono + Node.js** with a **three stage caching layer** and engineered a **5-agent harness** for automated real-time trading record pipeline - scaled to **10,000 concurrent users**.
- Built agentic UX flows for financial workflows, automated record processing pipelines, and maintained frontend features using **Next.js** - shipping production-ready dashboards used directly by end users.

Contract Full-Stack Developer - *Self-Employed, Remote*

2025 – Present

- Designed and built **end-to-end landing pages** for offline businesses moving online, custom **Figma** mockups to pixel-perfect implementation, owning design, frontend, backend, and deployment.
- Coordinated with a **3-person team** to ship an **AI-powered customer communication platform** to production, integrated a **live call bot and message bot** enabling real-time customer interactions at scale.

Projects & Work

PullRabbit - AI PR Code Reviewer 

- Built an **AI-powered GitHub PR reviewer** that installs as a **GitHub App**, processes webhooks via a BullMQ/Redis queue, and runs a **LangGraph multi-agent pipeline** to post inline review comments.
- Architected context-rich **review pipeline** with parallel AST diff analysis, SAST linting, code graph traversal, and **vector search (Qdrant)** to deliver precise, file-level AI feedback at scale.
- Tech Used:** TypeScript, LangGraph, BullMQ, Redis, Qdrant, PostgreSQL, GitHub API.

Datamind - Enterprise RAG System 

- Built a **hybrid retrieval pipeline** combining **BM25 + vector search** with **Cohere reranking**, achieving high-precision document retrieval over large enterprise corpora.
- Architected **multi-format document ingestion** with semantic chunking and a query orchestration layer, delivering unified, context-aware answers from a single query.
- Tech Used:** Python, FastAPI, LangChain, ChromaDB, Cohere, BM25, Next.js.

TradeX - Crypto Trading Platform 

- Built a **high-throughput trading platform** handling **5k+ events/sec** using Redis Streams, with **100ms latency** for order execution, supporting long/short positions, **leverage, PnL tracking, and stop-loss execution**
- Architected **Redis Streams** order processing with **WebSockets** for real-time market data and a **snapshot recovery mechanism** for crash resilience, same pattern used by Binance-scale systems.
- Tech Used:** TypeScript, Redis Streams, WebSockets, PostgreSQL, Docker.

Technologies

Frontend: TypeScript, JavaScript, React, React Native, Next.js, Tailwind CSS.

Backend: Node.js, Express, PostgreSQL, Prisma, Pub/Sub, WebSockets, Axum, Zod, JWT, Bcrypt, Redis streams, MongoDB, Python, FastAPI

AI tools: LangChain, LangGraph, Qdrant, Gemini, OpenAI, Anthropic SDK, Groq, RAG, Vector Embeddings, ChromaDB, Serper

Tools & DevOps: Git, GitHub, Docker, Turborepo, Vercel, DigitalOcean, Cloudflare

Open Source Contributions

OpenClaw - PR #75059 Implemented resilient auto-reconnect system with exponential backoff, CLI, improving system stability during gateway failures **merged**.

Naolabs(YC - X25) - PR #766 #720 – Patched .git/ directory leak; unified K/M/B number formatting across KPI cards and chart tooltips into a shared utility.

Education

Bharat Institute of Engineering and Technology
B.tech in Computer Science(AIML)

2022 – 2025
